Corn Deployment

Security Assessment

July 16th, 2025

Summary

Audit Firm Guardian

Prepared By Owen Thurm, Daniel Gelfand

Client Firm USDT0

Final Report Date July 16, 2025

Audit Summary

USDT0 engaged Guardian to review the security of their USDT0's deployment on Corn. From the 7th of March to the 8th of March, a team of 2 auditors reviewed the source code in scope. All findings have been recorded in the following report.

Confidence Ranking

Given the lack of critical issues detected and minimal code changes following the main review, Guardian assigns a Confidence Ranking of 5 to the protocol. Guardian advises the protocol to consider periodic review with future changes. For detailed understanding of the Guardian Confidence Ranking, please see the rubric on the following page.

Blockchain network: Corn

Guardian Confidence Ranking

Confidence Ranking	Definition and Recommendation	Risk Profile
5: Very High Confidence	Codebase is mature, clean, and secure. No High or Critical vulnerabilities were found. Follows modern best practices with high test coverage and thoughtful design.	0 High/Critical findings and few Low/Medium severity findings.
	Recommendation: Code is highly secure at time of audit. Low risk of latent critical issues.	
4: High Confidence	Code is clean, well-structured, and adheres to best practices. Only Low or Medium-severity issues were discovered. Design patterns are sound, and test coverage is reasonable. Small changes, such as modifying rounding logic, may introduce new vulnerabilities and should be carefully reviewed.	0 High/Critical findings. Varied Low/Medium severity findings.
	Recommendation: Suitable for deployment after remediations; consider periodic review with changes.	
3: Moderate Confidence	Medium-severity and occasional High-severity issues found. Code is functional, but there are concerning areas (e.g., weak modularity, risky patterns). No critical design flaws, though some patterns could lead to issues in edge cases.	1 High finding and ≥ 3 Medium. Varied Low severity findings.
	Recommendation: Address issues thoroughly and consider a targeted follow-up audit depending on code changes.	
2: Low Confidence	Code shows frequent emergence of Critical/High vulnerabilities (~2/week). Audit revealed recurring anti-patterns, weak test coverage, or unclear logic. These characteristics suggest a high likelihood of latent issues.	2-4 High/Critical findings per engagement week.
	Recommendation: Post-audit development and a second audit cycle are strongly advised.	
1: Very Low Confidence	Code has systemic issues. Multiple High/Critical findings (≥5/week), poor security posture, and design flaws that introduce compounding risks. Safety cannot be assured.	≥5 High/Critical findings and overall systemic flaws.
	Recommendation: Halt deployment and seek a comprehensive re-audit after substantial refactoring.

Project Overview

Project Summary

Project Name	USDT0
Language	Solidity
Codebase	https://github.com/Everdawn-Labs/usdt0-tether-contracts-hardhat and https://github.com/Everdawn-Labs/usdt0-oft-contracts
Commit(s)	Initial commit(s): 7eaec2935eae4fbb4b3ffc5c3812e1854aa5b7cb and 347d8da48e52231dfc4a93b816189e4bc817d160
Addresses	OFT Proxy: 0x3f82943338a8a76c35BFA0c1828aA27fd43a34E4 OFT Implementation: 0xCc174A13cF254E0455F0C73dB40b5F93c96DaaC2 OFT Proxy Admin: 0xa882c21c9df00958a958cde96f2b2ae8fb4315b1 USDT0 Proxy: 0xb8ce59fc3717ada4c02eadf9682a9e934f625ebb USDT0 Implementation: 0xf555a12bffaef20cc201a74ae6513cb4aadb34b9 USDT0 Proxy Admin: 0x779ded0c9e1022225f8e0630b35a9b54be713736

Audit Summary

Delivery Date	July 16, 2025
Audit Methodology	Static Analysis, Manual Review, Test Suite, Contract Fuzzing

Vulnerability Summary

Vulnerability Level	Total	Pending	Declined	Acknowledged	Partially Resolved	Resolved
Critical	0	0	0	0	0	0
• High	0	0	0	0	0	0
Medium	0	0	0	0	0	0
• Low	1	0	0	0	0	1
• Info	1	0	0	1	0	0

Audit Scope & Methodology

Vulnerability Classifications

Severity	Impact: High	Impact: Medium	Impact: Low
Likelihood: <i>High</i>	Critical	• High	Medium
Likelihood: Medium	• High	• Medium	• Low
Likelihood: Low	• Medium	• Low	• Low

Impact

High Significant loss of assets in the protocol, significant harm to a group of users, or a core

functionality of the protocol is disrupted.

Medium A small amount of funds can be lost or ancillary functionality of the protocol is affected.

The user or protocol may experience reduced or delayed receipt of intended funds.

Low Can lead to any unexpected behavior with some of the protocol's functionalities that is

notable but does not meet the criteria for a higher severity.

Likelihood

High The attack is possible with reasonable assumptions that mimic on-chain conditions,

and the cost of the attack is relatively low compared to the amount gained or the

disruption to the protocol.

Medium An attack vector that is only possible in uncommon cases or requires a large amount of

capital to exercise relative to the amount gained or the disruption to the protocol.

Low Unlikely to ever occur in production.

Audit Scope & Methodology

Methodology

Guardian is the ultimate standard for Smart Contract security. An engagement with Guardian entails the following:

- Two competing teams of Guardian security researchers performing an independent review.
- A dedicated fuzzing engineer to construct a comprehensive stateful fuzzing suite for the project.
- An engagement lead security researcher coordinating the 2 teams, performing their own analysis, relaying findings to the client, and orchestrating the testing/verification efforts.

The auditing process pays special attention to the following considerations:

- Testing the smart contracts against both common and uncommon attack vectors.
- Assessing the codebase to ensure compliance with current best practices and industry standards.
- Ensuring contract logic meets the specifications and intentions of the client.
- Cross-referencing contract structure and implementation against similar smart contracts produced by industry leaders.
- Thorough line-by-line manual review of the entire codebase by industry experts. Comprehensive written tests as a part of a code coverage testing suite.
- Contract fuzzing for increased attack resilience.

Findings & Resolutions

ID	Title	Category	Severity	Status
<u>L-01</u>	Delegate Is Not The Safe	Configuration	• Low	Resolved
<u>I-01</u>	Unexpected MultiSig Signer	Configuration	• Info	Acknowledged

L-01 | Delegate Is Not The Safe

Category	Severity	Location	Status
Configuration	• Low	Global	Resolved

Description

The delegate address assigned for the Corn OFT is the EOA 0x1a6362AD64ccFF5902D46D875B36e8798267d154.

Recommendation

Assign the delegate the safe on Corn: 0x57d798f9d3B014bAC81A6B9fb3c18c0242A9411E

Resolution

USDT0 Team: Resolved.

I-01 | Unexpected MultiSig Signer

Category	Severity	Location	Status
Configuration	Info	Global	Acknowledged

Description

The Corn Multisig introduces the 0x1a6362AD64ccFF5902D46D875B36e8798267d154 signer in place of the 0x00F6D2b4B69Ce697f913Da16A9D73283dc4C78F2 signer which is on the Eth safe.

Recommendation

Consider if this is expected and correct the signers before taking any actions if it is incorrect.

Resolution

USDT0 Team: Acknowledged.

Disclaimer

This report is not, nor should be considered, an "endorsement" or "disapproval" of any particular project or team. This report is not, nor should be considered, an indication of the economics or value of any "product" or "asset" created by any team or project that contracts Guardian to perform a security assessment. This report does not provide any warranty or guarantee regarding the absolute bug-free nature of the technology analyzed, nor do they provide any indication of the technologies proprietors, business, business model or legal compliance.

This report should not be used in any way to make decisions around investment or involvement with any particular project. This report in no way provides investment advice, nor should be leveraged as investment advice of any sort. This report represents an extensive assessing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology.

Blockchain technology and cryptographic assets present a high level of ongoing risk. Guardian's position is that each company and individual are responsible for their own due diligence and continuous security. Guardian's goal is to help reduce the attack vectors and the high level of variance associated with utilizing new and consistently changing technologies, and in no way claims any guarantee of security or functionality of the technology we agree to analyze.

The assessment services provided by Guardian is subject to dependencies and under continuing development. You agree that your access and/or use, including but not limited to any services, reports, and materials, will be at your sole risk on an as-is, where-is, and as-available basis. Cryptographic tokens are emergent technologies and carry with them high levels of technical risk and uncertainty. The assessment reports could include false positives, false negatives, and other unpredictable results. The services may access, and depend upon, multiple layers of third-parties.

Notice that smart contracts deployed on the blockchain are not resistant from internal/external exploit. Notice that active smart contract owner privileges constitute an elevated impact to any smart contract's safety and security. Therefore, Guardian does not guarantee the explicit security of the audited smart contract, regardless of the verdict.

About Guardian

Founded in 2022 by DeFi experts, Guardian is a leading audit firm in the DeFi smart contract space. With every audit report, Guardian upholds best-in-class security while achieving our mission to relentlessly secure DeFi.
