§ 06	About Guardian	p. 09

Overview.

Guardian reviewed the Celo implementation-upgrade changes in PR #118 and the Celo fork-test evidence. All eight fork tests passed.

REVIEW FIRM	Guardian	REPOSITORY	Everdawn-Labs/usdt0-tether-contracts-hardhat

1.1 Confidence Ranking

5/5

Very High Confidence

The prepared implementation was verified against the existing Celo proxy, and all eight fork tests passed. The reviewed evidence provides very high confidence in the Celo implementation upgrade at the report date.

1 V. LOW	2 LOW	3 MED	4 HIGH	5 V. HIGH
-------------	----------	----------	-----------	--------------

1.2 Findings at a Glance

SEVERITY	TOTAL	PENDING	IN PROG	DECLINED	ACK	PARTIAL	RESOLVED
Critical	0	0	0	0	0	0	0
High	0	0	0	0	0	0	0
Medium	0	0	0	0	0	0	0
Low	1	1	0	0	0	0	0
Info	0	0	0	0	0	0	0

§ 02

Confidence Ranking.

Guardian assigns a project-level confidence score using the scale below. The ranking combines finding severity, remediation outcome, and the reviewer's assessment of latent risk.

CONFIDENCE RANKING	DEFINITION AND RECOMMENDATION	RISK PROFILE
5 Very High Confidence ASSIGNED	Codebase is mature, clean, and secure. No High or Critical vulnerabilities were found. Follows modern best practices with high test coverage and thoughtful design. Recommendation: Code is highly secure at time of audit. Low risk of latent critical issues.	0 High/Critical findings and few Low/Medium severity findings.
4 High Confidence	Code is clean, well-structured, and adheres to best practices. Only 1 Significant issue was uncovered per week. Design patterns are sound, and test coverage is strong. Recommendation: Suitable for deployment after remediations; consider periodic review with changes.	0-1 High/Critical findings per engagement week and little to no Medium severity issues. Varied Low severity findings.
3 Moderate Confidence	Medium-severity and occasional High-severity issues found. Code is functional, but there are concerning areas such as weak modularity or risky patterns. No critical design flaws were identified, though some patterns could lead to edge-case issues. Recommendation: Address issues thoroughly and consider a targeted follow-up audit depending on code changes.	1-2 High/Critical findings per engagement week.
2 Low Confidence	Code shows frequent emergence of Critical/High vulnerabilities. Audit revealed recurring anti-patterns, weak test coverage, or unclear logic. These characteristics suggest a high likelihood of latent issues. Recommendation: Post-audit development and a second audit cycle are strongly advised.	2-4 High/Critical findings per engagement week, or additional unresolved High/Critical findings uncovered in remediation review.
1 Very Low Confidence	Code has systemic issues. Multiple High/Critical findings (≥ 5/week), poor security posture, and design flaws that introduce compounding risks. Safety cannot be assured. Recommendation: Halt deployment and seek a comprehensive re-audit after substantial refactoring.	≥ 5 High/Critical findings and overall systemic flaws.

§ 03

Scope.

Consolidated deployment scope covering the Celo implementation-upgrade source files and fork tests.

3.3.1 PR #118 · Source review

`.openzeppelin/usat/celo.json``scripts/usat_deploy.js``scripts/usat_deploy_celo.js``scripts/usat_upgrade_celo.js`

3.3.2 Fork tests

Eight Celo fork tests were included; all eight passed.

PASS	test_pr118_celo_token_implementation
PASS	test_pr118_satellite_token_initializers_are_locked
PASS	test_pr118_pr235_satellite_authorized_mint_transfer_burn_preserves_supply

PASS	test_pr118_eip712_domain_matches_domain_separator

§ 04

Findings.

The limited Celo implementation-upgrade review recorded one Low-severity finding. It remains Pending.

ID	TITLE	CATEGORY	SEVERITY	STATUS	PAGE
DEPLOYMENT REVIEW					
L-01	Celo deployment fails after proxy creation	Logical Error	LOW	PENDING	p. 7

LOW L-01

PENDING

Celo deployment fails after proxy creation.

CATEGORY Logical Error LOCATION scripts/usat_deploy_celo.js:19-21

DESCRIPTION

The Celo deployment script deploys the token and fee-wrapper proxies, then retrieves their implementation and admin addresses. However, the wrapper lookups receive the `feeWrapper` contract instance instead of its address:

```
JAVASCRIPT
1  await feeWrapper.deployed()
2  implementationAddress = await upgrades.erc1967.getImplementationAddress(feeWrapper);
3  adminAddress = await upgrades.erc1967.getAdminAddress(feeWrapper);
```

Both helpers expect an address string. Consequently, the first lookup throws a deserialization error, and the script exits with an error before printing the wrapper deployment details.

RECOMMENDATION

Pass the wrapper's address to both ERC-1967 helpers.

RESOLUTION

Status: Pending.

§ 05

Disclaimer.

This report is not, nor should be considered, an "endorsement" or "disapproval" of any particular project or team. This report is not, nor should be considered, an indication of the economics or value of any "product" or "asset" created by any team or project that contracts Guardian to perform a security assessment. This report does not provide any warranty or guarantee regarding the absolute bug-free nature of the technology analyzed, nor do they provide any indication of the technologies proprietors, business, business model or legal compliance.

This report should not be used in any way to make decisions around investment or involvement with any particular project. This report in no way provides investment advice, nor should be leveraged as investment advice of any sort. This report represents an extensive assessing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology.

Blockchain technology and cryptographic assets present a high level of ongoing risk. Guardian's position is that each company and individual are responsible for their own due diligence and continuous security. Guardian's goal is to help reduce the attack vectors and the high level of variance associated with utilizing new and consistently changing technologies, and in no way claims any guarantee of security or functionality of the technology we agree to analyze.

The assessment services provided by Guardian is subject to dependencies and under continuing development. You agree that your access and/or use, including but not limited to any services, reports, and materials, will be at your sole risk on an as-is, where-is, and as-available basis.

Cryptographic tokens are emergent technologies and carry with them high levels of technical risk and uncertainty. The assessment reports could include false positives, false negatives, and other unpredictable results. The services may access, and depend upon, multiple layers of third-parties.

Notice that smart contracts deployed on the blockchain are not resistant from internal/external exploit. Notice that active smart contract owner privileges constitute an elevated impact to any smart contract's safety and security. Therefore, Guardian does not guarantee the explicit security of the audited smart contract, regardless of the verdict.

About Guardian.

Founded in 2022 by DeFi experts, Guardian is a leading audit firm in the DeFi smart contract space. With every audit report, Guardian upholds best-in-class security while achieving our mission to relentlessly secure DeFi.
